Experience

Associate Software Engineer **Oct 2025 – Present**
ISchoolConnect *Noida, UP*

- Authored internal **Python data extraction pipelines** and complex **SQL queries on PostgreSQL**, aggregating **50K+ student records** to eliminate manual reporting overhead and accelerate operational analytics turnaround by **60%**.
- Designed interactive **business analytics dashboards** and reporting telemetry modules in **Next.js**, streaming high-volume usage audit logs to CSV with constant **O(1) memory** and **100% data reconciliation integrity**.
- Formulated clear technical use cases, **Jira user stories**, and **Confluence documentation** in cross-functional Agile sprints with Product Managers and QA, validating end-to-end data workflows and **UAT test coverage**.
- Improved the **Document Intelligence** pipeline by coupling deterministic articulation rule caches with **LLM fallback**, resolving **40%+** of course mappings without model inference to cut token costs by **40%** and eliminate prompt variance.
- Architected a decoupled two-tier **Go data ingestion pipeline** on **Cloud Run and Pub/Sub**, processing **10K+ delta records per 15-minute sync cycle** into **MongoDB** queues with lease-fenced consumers to guarantee zero data loss.
- Deployed commercial transcript evaluation platforms across **4+ enterprise university client engagements** generating **$150K+** contract value each, automating writeback of computed GPAs, credits, and grades into **Slate CRM**.

Software Engineer Intern **Apr 2025 – Sep 2025**
ISchoolConnect *Noida, UP*

- Reduced backend analytics API response latency **3× (15s to 5s)** by profiling **SQL execution plans (EXPLAIN)** across **PostgreSQL and MySQL** schemas, **indexing composite keys**, and eliminating redundant full-table scans.
- Maintained automated test execution and containerized deployments in an **Agile/Scrum** team, actively collaborating with Product, QA, and UX during sprint planning, **backlog grooming**, and **UAT test execution**.

Education

Guru Gobind Singh Indraprastha University **Dec 2021 – Jun 2025**
B.Tech, Electronics & Communication Engineering (2025 Graduate) *New Delhi, India*

- Coursework: Database Management Systems (DBMS), Relational Database Design (RDBMS), SQL & Query Optimization, Data Structures & Algorithms, Object-Oriented Programming (OOP), Software Engineering & SDLC.

Projects

Fluxpay | *Java, Spring Boot, Python, Apache Kafka, PostgreSQL, Redis, Docker, Git* github.com/Yash-Gupta-01/-Fluxpay

- Developed a high-throughput payments microservice in **Java (Spring Boot)** and **Python**, sustaining **1,200 TPS** in simulation at sub-**120ms** p95 latency, validating service capacity through authored **Artillery load test suites**.
- Modeled a **normalized PostgreSQL schema** with idempotency-aware **SQL transaction procedures** over a **Kafka** event pipeline, guaranteeing **zero duplicate transactions** across **500+ concurrent simulated users** under sustained load.

AI Interviewer | *Next.js, NestJS, TypeScript, MongoDB, OpenAI API, WebSockets* github.com/Yash-Gupta-01/AI-interviewer

- Engineered an AI assessment platform with **Next.js**, **NestJS**, and **OpenAI API**, establishing structured rubrics and **analytics dashboards** delivering objective scoring across candidate reviews with **100% data fidelity**.
- Integrated bidirectional streaming pipelines using **WebSockets** and **Vapi.ai**, enabling real-time voice screening evaluations and cutting candidate assessment turnaround by **50%** across **200+** monthly candidate reviews.

Technical Skills

- **Data Analytics & BI:** Looker Studio Pro (familiar), LookML (familiar), PowerBI, Business Dashboards, Telemetry Reporting
- **Languages & Querying:** SQL (PostgreSQL, MySQL, Complex Queries, Joins), Python (Pandas), JavaScript (ES6+), TypeScript, Go
- **Databases & Storage:** PostgreSQL, Snowflake (familiar), MongoDB, MySQL, Redis (caching), Query Optimization (EXPLAIN)
- **Methodology & Process:** Business Requirements (BRD), User Stories, Use Cases, System Workflows, UAT, Data Quality Checks
- **AI & Developer Tools:** Cursor IDE, GitHub Copilot, OpenAI API, LLM Fallback Pipelines, Langfuse, Prompt Engineering
- **DevOps & Collaboration:** Jira, Confluence, Git, GitHub Actions, Docker, Agile/Scrum (Sprint Ceremonies), Postman, Linux

Achievements

- Won **First Place** at the ISchoolConnect internal AI hackathon (**Rs. 50,000 award**) among 30+ engineering teams, architecting an automated real-time voice screening platform with WebSocket streaming and structured scoring rubrics.
- Secured **First Position** in HackBPIT (HashDefine, BPIT) and **First Runner-Up** in CodeGeeks Hackathon (DTU, 2023), recognized among 100+ teams for distributed system design, relational database modeling, and relief tracking.
- Solved **450+** Data Structures & Algorithms problems across LeetCode, GeeksforGeeks, Codeforces, and CodeChef, emphasizing algorithmic optimization, relational SQL querying, and systematic edge-case validation.
